LANGUAGES

- Spanish Native
- English Intermediate · B1-B2

TECH STACK

- Python
- FastAPI
- Flask
- React
- JavaScript
- TypeScript
- PostgreSQL
- SQL Server
- MongoDB
- SQLite
- Firebase
- Firestore
- SQLAlchemy
- JWT
- pytest
- Git
- Cisco IOS
- Leaflet/OSM

CORE COMPETENCIES

- Full-stack web development
- Python programming
- SQL & NoSQL databases
- REST API design & architecture
- App security (JWT, 2FA, bcrypt)
- Automated testing (pytest) & Git
- Networking foundation (Cisco CCNA)
- Learning: generative AI / LLMs

Floribeth Vindas Parra

Engineering Lecturer, UTN — Pacific Campus

Information Technology Engineering student and **web developer** who builds **complete web applications** end to end — REST APIs with FastAPI and Flask, interfaces in React, and secure authentication (JWT, 2FA). Versatile across the stack, with solid **Python** and hands-on experience in **relational and NoSQL databases** (PostgreSQL, SQL Server, MongoDB, Firebase). Backed by a **networking foundation (Cisco CCNA)** and currently exploring generative AI (LLMs). Problem-solving oriented and comfortable with version control (Git/GitHub).

01 PROJECTS & ACADEMIC EXPERIENCE

Full-Stack Development Projects

Jan 2024 — Present

Universidad Técnica Nacional (UTN) & independent work

Hands-on experience gained through coursework and self-directed projects across the full stack — web frontends, back-end APIs, and databases — covering the complete software lifecycle from requirements to deployment.

- Built **EduTrack**, a full-stack web platform (Flask 3 + PostgreSQL + React) with secure authentication (JWT, 2FA), **46+ automated tests (pytest)**, and caching that improved load time significantly.
- Designed and built **REST APIs** with FastAPI and Flask, with relational data modeling and clean, domain-organized architecture.
- Worked across **relational and NoSQL databases** — PostgreSQL, SQL Server, SQLite, MongoDB, and Firebase/Firestore — modeling data for real projects.
- Backed by a **networking foundation (Cisco CCNA)**; currently **exploring generative AI (LLMs)**, with an initial project using a local model (Ollama).

02 EDUCATION

Bachelor's Degree in Information Technology Engineering

2026 — Present

Universidad Técnica Nacional — El Roble, Puntarenas

Network administration, programming, advanced databases, agile methodologies, and information security. **Weighted GPA: 9.05 / 10.**

Associate Degree in Information Technology Engineering

2024 — 2025

Universidad Técnica Nacional — El Roble, Puntarenas

Software development, networking, information security, data analysis, and technology project management.

High School Diploma

2023

Liceo Rural Manzanillo — Puntarenas

03 CERTIFICATIONS

CCNA: Switching, Routing & Wireless Essentials

Cisco Networking Academy · UTN
NETWORKING · OCT 2025

CCNA: Introduction to Networks

Cisco Networking Academy · UTN
NETWORKING · JUN 2025

Python Essentials 1

Cisco / OpenEDG Python Institute
PROGRAMMING · NOV 2024

Python Fundamentals 1 (40 h)

MICITT · UTN/PIAE · Grade 94
PROGRAMMING · DEC 2024

Featured Projects

EduTrack — Academic Management System

IN PRODUCTION

2025 – 2026

CO-DEVELOPER · FULL-STACK

Production web platform that centralizes management of students, teachers, subjects, evaluations, attendance, and reports for educational institutions in Costa Rica.

- Backend in **Flask 3 + SQLAlchemy 2 + PostgreSQL**, using the application-factory pattern and blueprints by domain; **46+ automated tests** with pytest.
- Robust security: **2FA (TOTP)**, bcrypt hashing, rate limiting, account lockout, access auditing, CSP, and secure cookies.
- 4-role system** (super admin, admin, teacher, student) with an isolated student portal, weighted grade averaging, and academic-risk detection.
- PDF and Excel reports, Excel import, and transactional email (Brevo SMTP); dashboard caching delivered a **major load-time improvement**. Deployed on Render + Cloudflare.

Python 3.11 Flask 3 SQLAlchemy 2 PostgreSQL Bootstrap 5 2FA/TOTP pytest Render

PathAR — Pedestrian Navigation with AR & AI

2026

FULL-STACK · BACKEND FOCUS

University pedestrian navigation system assisted with augmented reality and artificial intelligence. I built the project's REST API and collaborated on the integration with the mobile app.

- Modular REST API with **FastAPI and PostgreSQL** (SQLAlchemy ORM), organized by routers: authentication, profile, locations, history, and favorites.
- Stateless authentication with **JWT (HS256)** and Google login via Firebase ID Token verification (Firebase Admin).
- Architecture ready for computer-vision modules (YOLOv8, SegFormer) and AR overlays; team's mobile app built in Flutter.

Python 3.12 FastAPI PostgreSQL SQLAlchemy JWT Firebase Flutter

N.O.V.A — AI Web Assistant

2025

WEB · FIRST AI EXPLORATION

Web assistant that answers questions about UTN, built as a first hands-on exploration of LLMs: a Python + Flask backend, a React interface, and a local model served with Ollama.

- First hands-on approach to LLMs: a local model served **with Ollama**, no external APIs.
- Python + Flask backend orchestrating institutional context, with a conversational React interface.

Python 3 Flask Ollama / LLM React JavaScript

Patitas Felices — Pet Adoption Network

2025

FULL-STACK

Web app (PWA) to post pets for adoption, report lost pets, shelters, and services, with real-time chat and geolocation.

- Serverless backend with **Firebase**: Auth, Firestore, Storage, and Cloud Functions (Node); push notifications via Cloud Messaging.
- Real-time chat between users through Firestore listeners (onSnapshot), similar to WhatsApp.
- Lost-pet mapping on interactive maps with **Leaflet + OpenStreetMap**; email OTP verification (EmailJS).

Firebase Firestore Cloud Functions Leaflet/OSM PWA JavaScript

Dados Triples — Multiplayer Mobile Game

2025

MOBILE · MULTIPLAYER

Dice game for mobile (Android/iOS) built in React Native + TypeScript, with a multiplayer server in Rust and a web viewer that lets you follow matches live from the browser in real time.

- Cross-platform mobile app in **React Native + TypeScript** with unit testing via Jest.
- Multiplayer server in **Rust** with real-time communication and a live web viewer.

React Native TypeScript Rust Jest Real-Time
